produced from available copy.

For administrative purposes, the Department of Health, Education, and Welfare divides the States and Territories into nine regional groupings. *The 1968 National Survey of Community Solid Waste Practices* is published as a series of nine volumes, one for each region. The States comprising those regions are shown below:

Region 1 (Volume 1) —Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont

Region 2 (Volume 2) —Delaware, New Jersey, New York, Pennsylvania

Region 3 (Volume 3) —Kentucky, Maryland, North Carolina, Virginia, West Virginia, District of Columbia, Puerto Rico, Virgin Islands

Region 4 (Volume 4) —Alabama, Florida, Georgia, Mississippi, South Carolina, Tennessee

Region 5 (Volume 5) —Illinois, Indiana, Michigan, Ohio, Wisconsin

Region 6 (Volume 6) —Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota

Region 7 (Volume 7) —Arkansas, Louisiana, New Mexico, Oklahoma, Texas

Region 8 (Volume 8) —Colorado, Idaho, Montana, Utah, Wyoming

Region 9 (Volume 9) —Alaska, Arizona, California, Hawaii, Nevada, Oregon, Washington, American Samoa, Guam

foreword

ING THE QUALITY of the human en-
nt has become one of the most im-
challenges to the scientific com-
n water and air pollution have been
al concern for more than a decade,
n—resulting from ineffective manage-
stes—has received national attention
ast three years. With passage of the
osal Act in October 1965, Congress
ecessity to invest more of our tech-
ncial resources in this previously for-

s of solid waste management must be
ed before they can be attacked. It
efore, that adequate and reliable data
the location, character, and quantity
produced, and that current collection
rations be fully described. The 1968
of Community Solid Waste Practices
npt to compile and report solid waste
ormly on a national basis.

Survey was designed by the Bureau
Management, the basic data were col-
ost part, by the respective State solid
agencies. There is every expectation
tion contained in this publication will
all levels of government as well as to
ustries, and other private organizations
improving the science of solid waste

— RICHARD D. VAUGHAN, *Director*
Bureau of Solid Waste Management

preface

THE SOLID WASTE DISPOSAL ACT of 1965 provides for grants of up to 50 percent of the costs to State and Interstate agencies for conducting surveys of solid waste practices and for developing solid waste disposal plans. Since a thorough knowledge of existing solid waste conditions is a rather conspicuous prerequisite to the development of comprehensive planning programs, the conduct of solid waste surveys was given a high priority by the States. But as only a few States had established solid waste programs, few had either the background or experience to develop and plan the required surveys. Thus, the States, through the Conference of State Sanitary Engineers in July 1966, recommended that the Bureau of Solid Waste Management prepare a list of essential data and guidelines for conducting the statewide surveys. The response to this request resulted in the formation of the 1968 National Survey of Community Solid Waste Practices.

The data listings, reporting forms, and specifications for the Survey were developed over a period of more than five months through the joint efforts of representatives of the Bureau of Solid Waste Management, State agencies, and private consultants. The Survey provides information on the types and amounts of solid waste collected, their disposition, and the resources (manpower, equipment, facilities, monies, etc.) required to carry out collection, reduction, and disposal activities. In addition to the inventory data, evaluations of existing reduction and disposal facilities are also provided. It must be emphasized, however, that the Survey is community-oriented. In general, little information was obtained from industries that handle their own waste or utilize their own on-site disposal facili-

ties. The same holds true for the on-site disposal of agricultural wastes. Additionally, no assessments of individual apartment house incinerators and similar types of facilities were made.

To provide maximum flexibility in conducting the Survey and in recording results, three reporting forms were used: one to report on the "community" itself and the other two for disposal sites only. The Community Description Report embraces four broad areas: storage, collection, disposal, and budget or fiscal. The two disposal forms, Land Disposal Report and Facility Investigation Report, focus on three areas: (1) description and evaluation of site, (2) quantitative data, and (3) fiscal data. In addition, the facility form contains a separate section on the design features and operational characteristics of incinerators.

To obtain adequate coverage and reliable data, the Survey was performed as a field investigation. The data were gathered by State personnel via personal interview or by direct observation. Under no circumstance was a form completed on the basis of a mail-out questionnaire. To insure uniformity in the data, the Bureau of Solid Waste Management issued an instruction manual * that discussed the Survey forms, their interpretation and nomenclature in detail. (It is recommended that users of the Survey data be completely familiar with the *Manual of Instructions.*) The Bureau also conducted seminars and workshops with the State personnel to promote additional consistency.

Survey forms completed by the participating States were forwarded to the Bureau of Solid Waste Management for processing in the Bureau's automatic data storage and retrieval system. This system was designed and operated under the direction of Charles R. Hampel, Chief, Computer Services, with programming and documentation being implemented by Charles R. Butler; Albert J. Klee, Chief, Operational Analysis, provided overall supervision and guidance. Upon receipt of the forms, the Survey information was coded in a prescribed manner,* keypunched, and processed through a Honeywell 400 computer. Tabulated computer printouts were returned to the States for verification of data and correction of any coding or keypunching errors.

To date, 38 States, the District of Columbia, and Puerto Rico have received State planning grants and are participating in the National Survey.† Because some of the grants are relatively new, only 30 States and the District of Columbia have contributed data to the Survey thus far. However, three States (Indiana, Iowa, and Kansas) were partially surveyed by personnel of the Bureau of Solid Waste Management, with the cooperation of the appropriate State agency, and these data are also included in this report.

The data listed in this publication represent Survey information that had been processed and incorporated into the system as of July 1, 1968. Information is provided on more than 6,300 communities representing over 46 percent (92.7 billion persons) of the total population of the United States. In addition to these communities, information is also included on more than 6,000 land disposal sites and 450 facilities. Thus, this inventory provides more information on solid waste practices in more communities than has been reported at any time in the past. Since many States have reported only partial results and others are only beginning their surveys, additional data will continue

Chief, Computer Services, with programming and documentation being implemented by Charles R. Butler; Albert J. Klee, Chief, Operational Analysis, provided overall supervision and guidance. Upon receipt of the forms, the Survey information was coded in a prescribed manner,* keypunched, and processed through a Honeywell 400 computer. Tabulated computer printouts were returned to the States for verification of data and correction of any coding or keypunching errors.

To date, 38 States, the District of Columbia, and Puerto Rico have received State planning grants and are participating in the National Survey.† Because some of the grants are relatively new, only 30 States and the District of Columbia have contributed data to the Survey thus far. However, three States (Indiana, Iowa, and Kansas) were partially surveyed by personnel of the Bureau of Solid Waste Management, with the cooperation of the appropriate State agency, and these data are also included in this report.

The data listed in this publication represent Survey information that had been processed and incorporated into the system as of July 1, 1968. Information is provided on more than 6,300 communities representing over 46 percent (92.7 billion persons) of the total population of the United States. In addition to these communities, information is also included on more than 6,000 land disposal sites and 450 facilities. Thus, this inventory provides more information on solid waste practices in more communities than has been reported at any time in the past. Since many States have reported only partial results and others are only beginning their surveys, additional data will continue to be generated. It is anticipated that this basic data will continue to be made available as more information is contributed by the States. It is also intended to render it more useful through the publication of special papers based on statistical analysis of the data.
